Joints

Colofon/Content

Annex for The Netherlands to *Joints* (Steel Design 5)

This annex has been prepared by prof.ir. J.W.B. Stark and prof.dr.ir. J. Wardenier and is based on the original Dutch version of *Joints*, published in 2014 by Bouwen met Staal as *Knopen* by the same authors. References are made to each **NA** symbol in *Joints* and – where relevant – the corresponding clause in the Eurocode.

Annexes to *Joints* (Steel Design 5) are also available for Belgium, Luxembourg and Switzerland and can be downloaded free of charge from the website of Bouwen met Staal.

Joint characteristics in frames

1 Annex NL

NL1.1 Eurocode terminology of connection and joint.

English	Dutch (EN 1993-1-8)	Dutch (common use)	French	German
connection	verbinding	verbinding	attache	Verbindung
joint	verbinding	knoop	assemblage	Anschluss

NL1.2 Use of connection and joint in Dutch, French and German language.

p. 1-2

EN 1993-1-8, cl. 1.4

The terms 'connection' and 'joint' (according to Eurocode) are illustrated in figure NL1.1 and have also respective Dutch, German and French equivalents (table NL1.2).

However, 'connection' is often used where 'joint' is appropriate according to the given definitions.

So in practice it is certainly necessary to remain attentive to what is actually meant.

In the Dutch translations of EN 1993-1 (both NEN-EN and NBN) the term 'verbinding' is used for both connections and joints. The term 'knoop' is used for a sub-assemblage of a beam-to-column connection as shown in EN 1993-1-8, fig. 1.1 (see fig. NL1.1).

Moreover, in the field of welding-technology, the term 'joint' is used for exactly the welded area (as in 'butt welds in T-joints').

And even in this textbook (*Joints*) the term 'connection' is sometimes used where strictly speaking it is a 'joint' (occurring mostly in chapter 5).

p. 1-56

Moment-resistant joints in frames

p. 3-10a

The recommended value for buildings $\gamma_{M0} = 1,0$ is accepted.

EN 1993-1-1, cl. 6.1(1)

p. 3-10b

The recommended value $\gamma_{M0} = 1,0$ is accepted.

EN 1993-1-1, cl. 6.1(1)

p. 3-13

The recommended value $\gamma_{M0} = 1,0$ is accepted.

EN 1993-1-1, cl. 6.1(1)

p. 3-36a

The recommended value for buildings $\gamma_{M2} = 1,25$ is accepted.

EN 1993-1-1, cl. 6.1(1)

p. 3-36b

The recommended value $\gamma_{M0} = 1,0$ is accepted.

EN 1993-1-1, cl. 6.1(1)

p. 3-44

The recommended value $\gamma_{M0} = 1,0$ is accepted.

EN 1993-1-1, cl. 6.1(1)

Column bases

p. 4-9a

EN 1992-1-1, cl.3.1(6)

The recommended value $\alpha_{CC} = 1,0$ is accepted.

p. 4-9b

EN 1992-1-1, cl.3.1(6)

The recommended value $\gamma_c = 1,5$ is accepted.

p. 4-11

EN 1992-1-1, cl.3.1(6)

The recommended value $\gamma_c = 1,5$ is accepted.

p. 4-19

EN 1992-1-1, cl.3.1(6)

The recommended value $\gamma_{Mc} = \gamma_c = 1,5$ is accepted.

p. 4-23

EN 1993-1-1, cl. 6.1(1)

The recommended value $\gamma_{M2} = 1,25$ is accepted.

p. 4-27

EN 1992-1-1, cl.3.1(6)

The recommended value $\gamma_c = 1,5$ is accepted.

p. 4-29

EN 1993-1-1, cl. 6.1(1)

The recommended value $\gamma_{M2} = 1,25$ is accepted.

p. 4-30
